

Credit Name: CSE 2140 2nd Language Programming

Assignment Name: Projects mastery

How did you develop your ideas through the project?

The purpose of this project was simple: ask the user for a few marks of time, and organize it in a table. So I started creating a variable for each task and then stored in it the value prompted by the user. I created a total variable, and a percentage variable for each task, using the same formula I used in the elections program, and displayed it in a table using the same method I used on elections program.

```
System.out.format("%-10s %9.2f%%\n", "Designing", totalDesign);  
System.out.format("%-10s %9.2f%%\n", "Coding", totalCode);  
System.out.format("%-10s %9.2f%%\n", "Debugging", totalDebug);  
System.out.format("%-10s %9.2f%%\n", "Testing", totalTest);
```
