

Credit Name: CSE 2140 2nd Language Programming

Assignment Name: MySavings mastery

How has your program changed from planning to coding to now? Please explain?

I ended adding a few variables `addPennies`, `addNickels`, `addDimes`, `addQuarters`; for the options 2 to 5, before those options only add one penny/nickel/dime/quarter

```
case 2:
    System.out.print("Enter number of pennies to add: ");
    piggyBank.addCoins(1, 0, 0, 0);
    System.out.println("Added " + 1 + " penny.");
    break;
case 3:
    System.out.print("Enter number of nickels to add: ");
    piggyBank.addCoins(0, 1, 0, 0);
    System.out.println("Added " + 1 + " nickel.");
    break;
case 4:
    System.out.print("Enter number of dimes to add: ");
    piggyBank.addCoins(0, 0, 1, 0);
    System.out.println("Added " + 1 + " dime.");
    break;
case 5:
    System.out.print("Enter number of quarters to add: ");
    piggyBank.addCoins(0, 0, 0, 1);
    System.out.println("Added " + 1 + " quarter.");
    break;
```
