Credit Name: CSE 2140 2nd Language Programming

Assignment Name: GuessingGame mastery

How has your program changed from planning to coding to now? Please explain?

I just decide to add some checking for valid input such like this

```java
    // Validate input
    if (input.hasNextInt()) {
        userNum = input.nextInt();
        if (userNum < 1 || userNum > 20) {
            System.out.println("Please enter a number within the range.");
            continue;
        }
        attempts++;

    (.....)
    } else {
        System.out.println("That's not a valid number. Please enter a number between 1 and 20.");
        input.next(); // Clear the invalid input
    }
```
Where the code can check if the input is within the range or if it's even an int number
